Filesystem examination · summary of findings

Client: N. Arslan (engaged by Halcyon Systems AG board) · Date: 17.11.2025

**STRICTLY CONFIDENTIAL. Distribution: N. Arslan only. Do not disclose the findings below to any Halcyon employee.**

## 1. Scope

Forensic image of the scratch array 'scratch-02' (non-redundant, not connected to the audit pipeline) taken 15.11.2025. Local filesystem metadata and journal analysed for 10.10.2025 to 13.10.2025.

## 2. Method note

All times in this report are UTC, as recorded by the array's journal. Local time in St. Gallen on these dates was UTC+2 (CEST).

## 3. Findings

3.1 21:10 UTC, Fri 10.10: a bulk copy job starts, reading MERIDIAN checkpoint bundles and the corpus manifest and writing to an externally attached block device (high capacity, portable array class, USB identifiers recorded in annex B).

3.2 The bundles decompress on write in this pipeline; the job did not account for the expansion. At approx. 40% the target device reports full and the job terminates with an error (journal entry annex C).

3.3 00:41 UTC, Sat 11.10: an older snapshot on the destination device is deleted, freeing approx. 9.1 TB. The free-space jump is visible in the array metrics.

3.4 00:44 UTC: the same job is started again from the beginning (not resumed).

3.5 03:52 UTC, Sat 11.10: the second run completes without error. The device is detached at 03:58 UTC.

3.6 No decoy bundle (per the list provided by I. Ammann) was read at any point.

## 4. Not established

The identity of the operator cannot be established from the array. No user session information is recorded on scratch volumes. The job was started from a workstation console on the engineering floor (local session, no network login).

### **Annex A · timeline (UTC)**

21:10 job start (run 1)

~00:20 target full, run 1 terminates

00:41 snapshot deleted on target (~9.1 TB freed)

00:44 job start (run 2, from the beginning)

03:52 run 2 complete

03:58 device detached

### **Annex B · device**

Vendor/product IDs and serial recorded; see sealed annex (not included in this summary).

### **Annex C · journal excerpts**

Withheld from this summary at the client's request.
